OASIS: European sustainability innovators: building green competences in the construction sector

About OASIS Project

The **OASIS project** – **European sustainability innovators: building green competences in the construction sector** – officially kicked off on 1 December 2024. An initiative supported by the Erasmus+ programme, it involves six partners from France, Italy, Greece and Bulgaria working together to tackle a common challenge: training green skills in the construction sector.

Why OASIS?

The construction sector is responsible for around 36% of CO₂ emissions in Europe. At the same time, it represents an extraordinary opportunity to innovate and drive the ecological transition.

The OASIS project stems from a concrete observation: **many professionals in the construction sector do not yet have the skills needed to tackle the ecological transition.** Vocational education and training (VET) in Europe, while essential, is not yet fully aligned

with the needs of the green job market. In a context where the construction sector is responsible for 36% of CO₂ emissions and where the **European “Renovation Wave” directive** is pushing for rapid energy renovation of the building stock, there is an urgent need

to equip students and professionals with up-to-date, practical and sustainable knowledge. OASIS responds to this need by **providing tools, training methods and real opportunities to integrate sustainability into training courses** and the daily activities of businesses.

OBJECTIVES

- Train VET students and professionals on green infrastructure and sustainability.
- Develop innovative teaching resources and blended learning.
- Create a mentoring programme based on GreenComp, the European skills framework for sustainability.
- Promote dialogue between businesses and training institutions, aligning skills with the real needs of the labour market.

The first steps of the project: kick-off meeting and second TPM in Ruse

The OASIS project officially kicked off with an online kick-off meeting held at the beginning of the project, during which the partners got to know each other and discussed roles, budget, documentation and common tools to be used. CAPEB Grand Paris, as coordinator, outlined the responsibilities and operational functioning of the project.

The second transnational meeting was held on 11 March 2025 in Ruse, Bulgaria, hosted by the Ruse Chamber of Commerce and Industry. During the meeting, the partners discussed the progress of activities, quality, communication and the development of the first educational resources on green infrastructure. It was a valuable opportunity to consolidate collaboration and plan the next steps.

What we will be doing in the coming months

- Identifying best practices and case studies of sustainable buildings
- Developing training videos and teaching materials
- Launching a blended course for students and artisans
- Starting mentoring and business coaching activities
- Organising events, webinars and an international summer school

The consortium

Coordinator

CAPEB Grand Paris (France)

Partners

DELTA SCHOOLS NORTHERN GREECE S.A. (Greece)

FALCO&ASSOCIATI SRL (Italy)

FONDAZIONE C.I.O.F.S. - F.P. ETS (Italy)

RUSE CHAMBER OF COMMERCE AND INDUSTRY (Bulgaria)

ENOSI VIOMICHANION ILIAKIS ENERGEIAS (Greece)

A project supported by the European Union

Co-funded by
the European Union

OASIS is co-funded by the European Union's Erasmus+ programme, under the **KA220-VET action – Cooperation partnerships in vocational education and training**. The Erasmus+ programme supports innovative projects that promote the development of key skills, the green transition and cooperation

between training institutions and the world of work. Thanks to this European funding, OASIS will be able to make a **concrete contribution to the growth of green skills in the construction sector**, strengthening the quality and relevance of vocational training across Europe.
